## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-10, 30, 31, 40, 43 drawn to a system for conditioning scale, classified in class 134, subclass 56R.
  - II. Claims 23-28, drawn to an aqueous solution, classified in class 510 or in class 252, subclasses varies.
  - III. Claims 32-39, 44, 45, drawn to another system for conditioning scale, classified in class 134, subclass 56R.

The inventions are distinct, each from the other because of the following reasons:

1. Inventions of Group I and Group II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the invention of group I recites the structural limitations of scale conditioning system and the invention of group II is concerned with composition of aqueous solution. Thus, the inventions are not disclosed as being used or capable of use together and they have different functions.
2. Inventions of Group III and Group II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04,

Art Unit: 1746

MPEP § 808.01). In the instant case the invention of group III recites the structural limitations of scale conditioning system and the invention of group II is concerned with composition of aqueous solution. Thus, the inventions are not disclosed as being used or capable of use together and they have different functions.

3. Inventions of Group III and Group I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it does not require to control the flow individually from each reservoir to at least one nozzle, it does not require to dispose at least one nozzle on each side of the strip, it does not require the use of surface coverage analyzer, adjacent to at least one nozzle. The subcombination has separate utility such as apparatus for coating or painting of metal surfaces.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

6. Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I or III, restriction for examination purposes as indicated is proper.

2. A telephone call was made to Mr. W. Hogg, esq., on 08/26/2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
